

BONUS 2 OF 3

Game Launch Checklist

YOU GET

A step-by-step list from "almost done" to "live and growing".

Print it, tick it off, launch with confidence. Every item here is covered in the course; this is the version you keep on your desk.

1. Before you publish

Gameplay

- ☐ A new player understands what to do within 30 seconds, without reading anything
- ☐ The core loop is fun for 10 minutes with zero upgrades
- ☐ Every hazard is visibly dangerous (color, glow, sound)
- ☐ You tested a full session with at least 2 players (**Test** → **Clients and Servers**)

Technical

- ☐ No errors in **Output** during a full playtest
- ☐ Every RemoteEvent validates types, values, state and rate
- ☐ Data saves on leave, on autosave and on shutdown (`BindToClose`)
- ☐ Data loading failures kick with a message instead of giving a blank profile
- ☐ Developer products are granted only in `ProcessReceipt` , with receipt records
- ☐ No unknown scripts from the Toolbox (search all scripts for `require( )`)

Devices

- ☐ UI checked in the device emulator: phone, tablet, desktop, console
- ☐ Buttons are big enough to tap (at least ~44 px on a phone)
- ☐ Tested on a real phone from your own account

2. Your game page

- ☐ Icon: one clear subject, bold colors, readable at tiny size, little or no text
- ☐ 3+ thumbnails showing real gameplay moments with short captions
- ☐ Title: short and clear about the genre
- ☐ Description: first two lines say what you do and why it's fun
- ☐ Genre, supported devices and maturity questionnaire filled in
- ☐ Server size set (8–12 for most round-based games)

3. Launch day

- ☐ Set the experience to **Public**
- ☐ Play it yourself from phone and PC one last time
- ☐ Post a short clip (15–30 s) of the best moment on TikTok, Reels and Shorts
- ☐ Share it in your Roblox community group and Discord

- ☐ Ask 5 friends to play, and watch them play without helping

4. First week

- ☐ Check **Analytics** daily: day-1 retention, session length, where players leave
- ☐ Log onboarding funnel steps and find the step with the biggest drop
- ☐ Fix the #1 drop-off before adding anything new
- ☐ Reply to every comment and bug report
- ☐ Ship a small update with a changelog by day 7

5. Growing

- ☐ Update every 1–2 weeks (new map, upgrade, event, or code)
- ☐ Run an **icon experiment** with 2–3 variants
- ☐ One short-form clip per day from real gameplay
- ☐ Only run Roblox Ads once day-1 retention is healthy
- ☐ Change one price at a time and compare a week before vs. after

WATCH OUT

Don't judge your game by day 1. Most games that grow do it through steady updates over weeks, not a lucky first day.
